Happy Birthday, Fox Thermal Instruments!

FOX CELEBRATES 20 YEARS OF EXCELLENCE !

Grown from the small business startup of a California Tech-educated Engineer, Fox Thermal Instruments now has a 19,000 square foot manufacturing facility featuring advanced flow calibration labs and production facility! Fox is located in Marina, California just north of the beautiful Monterey Peninsula and has enjoyed many years of success.

Fox Products have evolved from the first product, the Model 10A, to the state-of-the-art Model FT3 Thermal Mass Flowmeter and Temperature Transmitter. Making its name by being the first flowmeter manufacturer to create a thermal mass flow meter with an onboard microprocessor, Fox Thermal Instruments has always worked to be the leader in quality and innovation.

We have had a great 20 years and look forward to celebrating many more in the years to come!

The Improved Fox Model FT2A

When Fox Thermal Instruments first introduced the Model FT2 in 2001, it quickly became the most trusted thermal mass flow meter and temperature transmitter on the market. It has been a popular and high-demand product for more than 12 years.

As demand increased in broadening markets, Fox engineers determined that upgrading the design and features would further raise quality and add to the customers' overall user experience. With this in mind, Fox has taken a hard look at its most trusted product, brought it back to the drawing board, and revolutionized the design of the flow meter in order to offer Fox customers an even more robust flow meter for harsh industrial environments. Furthermore, to expand to the Building Automation industry, Fox has broadened the communications options available on the FT2A to include BACnet MS/TP. Read more...

The Award-Winning Fox Model FT3

Truly the most ground-breaking feature on the Model FT3, Calibration Validation was designed in order to reduce the need to send the meter back to the factory for calibration. Using two tests - CAL-V™ and Zero CAL-CHECK™ - the FT3 allows users to validate the calibration of the meter in the pipe with just the push of a button. This feature made the Model FT3 the winner of Processing's Breakthrough Product of the year (2012) and Flow Control's Innovation Awards (2013).
