Fox Thermal Instruments Statement re: NAMUR NE 43

The purpose of the NAMUR NE 43 function is to indicate alarm conditions on the Fox flow meters. During normal operation, the flow meter output uses the 4 to 20 mA range for transmitting measurement information. During an alarm condition, the output transmits a ≤ 3.6 mA or ≥ 21 mA signal to report failures. Switching the NAMUR NE 43 function on or off is selectable by the user in the field.

For more information about NAMUR, please visit <http://www.namur.net/en/home.html>

For more information on alarms used by Fox flow meters, please refer to the instruction manual.

Sincerely,

Rich Cada
