

Does the Federal Clean Air Act Affect Your Business?

Gas Flowmeter with Non-Resetting Totalizer Available

The Federal Clean Air Act (FCAA) requires the U.S. EPA to set national ambient air quality standards to ensure public health. State agencies, as well as regional and metropolitan air quality management districts are responsible for ensuring attainment and maintenance of these standards.

Owners and/or operators of units (boilers, kilns, dryers and other combustion processes) subject to these regulations may install a non-resetting totalizing fuel flow meter (TFF) to measure the total of each fuel used by each individual unit.
