Introduction

Thank you for purchasing the Model FT3 Thermal Gas Mass Flow meter and Temperature Transmitter from Fox Thermal Instruments. The Model FT3 is one of the most technically advanced flow meters in the world. Extensive engineering effort has been invested to deliver advanced features, accuracy measurement performance and outstanding reliability.

The new FT3 View software allows users to easily display data and configure the FT3 to their specific application parameters. Then, log flow/temperature data to an Excel file. The software can also activate the new Fox CAL-V™ and Zero CAL-CHECK™ diagnostic functions.

This User's Guide contains the operation instructions for the Calibration Validation diagnostic tests: CAL-V™ and Zero CAL-CHECK™.

This User's Guide is divided into the following sections: Introduction, Start Up, Operation, Troubleshooting, Glossary and Index.

Calibration of the Fox Model FT3 Thermal Flow Meter

To ensure that all Fox flow meters meet specified performance parameters and provide accurate, repeatable measurements in the field, all calibrations are performed with NIST-traceable flow standards. Each meter is shipped from the factory with a Fox Calibration Certificate.

Calibration Validation

Validating the calibration of your FT3 Flow Meter is simple and easy. By performing two simple tests in the field, operators can verify that the meter is running accurately by testing the functionality of the sensor and its associated signal processing circuitry.

The first test, CAL-V™, tests the functionality of the sensor and its associated signal processing circuitry and can be done in the pipe and in normal processing conditions (see "CAL-V™ Calibration Validation Test" on page 6). The second test, Zero CAL-CHECK™, ensures the repeatability and cleanliness of the sensor (see "Zero CAL-CHECK™ Calibration Validation Test" on page 7).

See Figure 1.1 on the following page to understand Calibration Validation with these two tests.
Calibration Validation

**Fig. 1.1: Total Calibration Validation**

### CALIBRATION VALIDATION

**FOX MODEL FT3 GAS FLOW METER**

**INSITU**
- Complete test of sensor elements and electronics
- In your pipe, under normal process conditions
- Operator-initiated via front panel, FT3 View™, MODBUS, or HART
- Hold outputs at last value or go to zero; operator-selectable
- Test takes less than 5 minutes; 3 minutes typical
- Test results in pass/fail message
- Data saved in meter for look-up anytime
- Calibration Validation Certificate can be generated if test is initiated using FT3 View™ software

**CAL-V™**

**SENSOR TEST AT ZERO FLOW VS. FIELD BASELINE**

**ZERO CAL-CHECK™**

**SENSOR TEST AT ZERO FLOW VS. FACTORY BASELINE**

**OUT OF PIPE**
- Test compares sensor characteristics at zero flow at ambient temperature and atmospheric pressure with factory characteristics
- Used to confirm Zero CAL-CHECK™ when insitu zero flow condition cannot be established
- Operator-initiated from front panel or FT3 View™
- Test takes less than 5 minutes after out of pipe set-up complete
- Calibration Validation Certificate can be generated if test is initiated using FT3 View™ software

---

**NOTE.** For accurate readings and best test results:

1. Perform a visual inspection of sensor window for damage/deformity and condition of sensor elements before starting the test.
2. The meter must be used in the same pipe size, with the same gas mixture, and in the same process conditions for which the meter was originally calibrated in the factory. Consult the original factory calibration certificate for details.

---

Figure 1.1 above illustrates the Calibration Validation feature and a summary of the details for each of the two tests.

Fox has developed Calibration Validation, using the CAL-V™ and Zero CAL-CHECK™ tests to help our customers avoid sending the meter back for annual or biennial re-calibrations.

Using Calibration Validation allows our customers to validate the accuracy and functionality of the meter in the field with a push of a button.
CAL-V™ Calibration Validation Test

This menu allows the user to confirm the calibration accuracy of the Fox FT3 Flow Meter by verifying the functionality of the sensor and sensor signal processing circuitry. During the CAL-V™ calibration validation test, the microprocessor adjusts the current to the sensor elements and determines the resulting electrical characteristics. These site-determined characteristics are compared with the data that was collected at the factory during the original meter calibration. Matching data within established tolerances confirms the meter is accurate within published accuracy specifications.

This test can be performed under no flow or normal flow conditions. The test takes about 4 minutes to complete. At the conclusion of the test, a Pass or Fail message will be displayed.

Note: If the CAL-V™ test is performed using the Fox FT3 View™ Software, at the completion of the test, a CAL-V™ Certificate may be printed for a record of the test. This certificate will display the CAL-V™ values and a pass/fail result.

Fig. 1.2: Normal Mode vs. CAL-V™ Mode
Zero CAL-CHECK™ Calibration Validation Test

The Zero CAL-CHECK™ test is used to ensure that the flow meter still retains its original NIST-traceable calibration at zero flow. If zero flow can be established, the sensor does not need to be removed and the procedure can be done in the pipe. Alternatively, a Fox Packing Gland Assembly can be used to remove the sensor from the gas stream to create a “no flow” condition.

Note: If the Zero CAL-CHECK™ test is performed using the Fox FT3 View™ Software, at the completion of the test, a Zero CAL-CHECK™ Certificate may be printed for a record of the test. This certificate will display a pass/fail result.

Fig. 1.3: Normal Mode vs. Zero CAL-CHECK™ Mode
Start Up

CAL-V™

Starting Up CAL-V™
CAL-V™ may be performed at any time after installation and at any flow rate, including zero flow. You do not need any extra equipment or paperwork to perform a CAL-V™ test. Refer to “Performing a CAL-V™ Calibration Validation Test” on p. 16 of this User’s Guide to start CAL-V™.

Zero CAL-CHECK™

Starting Up Zero CAL-CHECK™
There are a few ways that Zero CAL-CHECK™ is different than CAL-V™:

- The Zero CAL-CHECK™ test must be performed at a "no flow" condition (ie zero flow)
- If the Zero CAL-CHECK™ test is to be performed in the pipe, the field baseline must be set before an actual test can be performed (see "Setting Field Baseline for In-Situ Zero CAL-CHECK™ Tests" on p. 9).
- If the Zero CAL-CHECK™ test is to be performed out of the pipe, the meter must be set upside-down (probe pointing up) and the PVC sensor protector that the meter was shipped with must be placed back over the sensor to achieve the factory baseline that the meter has been set with.

Achieving Zero Flow - In-Situ (In the Pipe)

Achieving Zero Flow - Out of Pipe

Techniques for Achieving Zero Flow - In the Pipe
In-situ (in the pipe) Zero CAL-CHECK™ testing can be achieved in one of two common ways:

1. Fox Packing Gland Assembly
   The first in-situ option is achieved through the use of a Fox Packing Gland Assembly that may be ordered as an option for most inline- or insertion-type meters. The assembly allows the operator to retract and isolate the sensor from the process in order to conduct the Zero CAL-CHECK™ test. This is particularly beneficial for applications in which the process is not easily stopped.

2. Pipe Bypass / Valving-Off
   The second in-situ option, if space allows, is to redirect the flow through a bypass pipe section or valve off the meter in order to isolate the meter's sensor in the place where it has been installed. While the flow is redirected, the Zero CAL-CHECK™ test can be performed. Once the test is complete, the valves to the bypass may be closed and flow may be directed back to the meter's sensor where flow monitoring can continue as normal.

Achieving Zero Flow - Out of Pipe
If space limitations prevent in-situ testing at zero flow as listed above, then Out
of Pipe testing must be performed. With this configuration, the meter must be removed from the process, the test performed, and then the meter returned to the process after testing has been completed.

Due to the high sensitivity of the PowerPro™ sensor, it is necessary to isolate the sensor once the meter has been removed from the pipe. Therefore, Fox provides a sensor cover when the meter is shipped to the customer. An alternative to the sensor cover is to use a bottle or other closed container in order to isolate the sensor and achieve the "no flow" condition necessary to perform the Zero CAL-CHECK™ test.

Fig. 2.1: Fox-Supplied PVC Sensor Protector vs. Plastic Bottle

NOTE: For best results:
1. Use the factory-supplied PVC sensor protector shipped with the meter (see Fig. 2.1 above).
2. Place the meter upside-down on a flat, solid surface before starting the test.
3. Do not allow the meter to get jostled - make sure the meter is stable and the sensor completely isolated.

Setting Field Baseline for In-Situ Zero CAL-CHECK™ tests
After calibration of every FT3 meter, a lab technician sets the factory baseline for Zero CAL-CHECK™ tests. If you are planning on removing the meter from the process to perform the test, you do not have to set the baseline; however, if you plan to perform the test in-situ (in the pipe) or using a Fox Packing Gland Assembly, you must set the field baseline before performing the test. Now that the sensor is isolated in the chamber of the Packing Gland Assembly,
Using a Fox Packing Gland Assembly
The following are the instructions for using a Fox Packing Gland Assembly to set the field baseline for - or performing - an in-situ Zero CAL-CHECK™ test. If you are not using a Fox Packing Gland Assembly, move ahead to "Starting the Field Baseline Set" on p. 13.

Note: If you need information on the installation of the Fox Packing Gland Assembly, refer to Fox Document 102497.

Fig. 2.2: FT3 and Parts of Fox Packing Gland Assembly
Start Up

Packing Gland Assembly

In order to isolate the sensor, it must be retracted from the pipe. Loosen the small nut of the compression fitting using 7/8" and 13/16" wrenches. Once loosened, the probe will be able to slide upwards (see Figure 2.4 below).

Fig. 2.4: Loosening the Compression Fitting
Start Up

Packing Gland Assembly

With one hand supporting the meter, slide the probe up through the Packing Gland Assembly until the internal stop makes contact. Close the Valve Shut-off handle by turning the lever 90° clockwise to isolate the sensor within the chamber of the Packing Gland Assembly. Then slightly tighten the compression fitting to keep a seal in the chamber.

Fig. 2.5: Isolating the Sensor in Packing Gland Assembly Chamber
Start Up

Packing Gland Assembly

the FT3 meter is ready to either perform the Zero CAL-CHECK™ test or set the Field baseline for future tests.

When the meter has completed the test, be sure to open the shut-off valve, slide the meter downward until the ferrule rests in the fittings, and tighten the small nut of the fittings in order to seal the probe in the stream again.

Check to be sure the meter has returned to normal operation.

Setting Field Baseline

Starting the Field Baseline Set

After the meter has been installed and wired correctly (see the Fox FT3 Instruction Manual that came with the meter), power on the meter. The meter should default to display #1. Press "F1" to program the meter. Press Yes (F1) to set Parameters and you will be prompted to enter the password. Use a Level 2 password (9111). The display will show:

```
<table>
<thead>
<tr>
<th>SET PARAMETERS</th>
</tr>
</thead>
<tbody>
<tr>
<td>I/O</td>
</tr>
</tbody>
</table>

F1  F2  F3  F4
```

Press FLO (F2) to go to the Flow Parameter 1 Menu.

```
<table>
<thead>
<tr>
<th>FLOW PARAMETER 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>DGN</td>
</tr>
</tbody>
</table>

F1  F2  F3  F4
```

Press DGN (F1) to go to the Diagnostic Test Menu.

```
<table>
<thead>
<tr>
<th>DIAGNOSTIC</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIM</td>
</tr>
</tbody>
</table>

F1  F2  F3  F4
```

Press TST (F2) to get to the Diagnostic Test Sub-Menu.
Start Up

Setting Field Baseline

Choose ZRO (F2) for Zero CAL-CHECK™.

Choose PIP (F1) for in-situ Zero CAL-CHECK™.

To set the field baseline, choose SET (F2).

Choose YES (F1) to set the field baseline.

Note: At this point, you must make sure that there is a no flow condition in the pipe (see "Techniques for Achieving Zero Flow - In the Pipe" on p. 8). Also be sure that the meter will be stable for the duration of the setting process.

If there is no flow and the meter is stable, press YES (F4). The display will
Setting Field Baseline

show:

```
Setting ZRO ref
ZR=x.xxxxx    T=xx
```

As the meter is setting the field baseline, the meter will display the reference value for the Zero baseline (ZR=x.xxxxx) and a countdown timer (T=xx) to approximate the time until the completion of the set.

Depending on the meter configuration, the set may take between 5-15 minutes to complete.

Note: Do not interrupt the set by touching the meter or changing conditions in the pipe.

At the conclusion of the set, the display will show:

```
Ref=x.xxxx
OK
```

Press **OK (F4)** to return to the Zero CAL-CHECK™ menu.

The meter may now perform Zero CAL-CHECK™ tests at the Field Baseline at any time.
Performing the CAL-V™ Calibration Validation Test
This menu allows the user to confirm the calibration of the FT3 by verifying the functionality of the sensor and sensor signal processing circuitry. During the CAL-V™ calibration validation test, the microprocessor adjusts current to the sensor elements and determines the resulting electrical characteristics. These site characteristics are compared with the data that was collected at the factory during the original meter calibration. Matching data within established tolerances confirms the meter is accurate. This test can be performed under no flow or normal flow conditions. The test takes up to four minutes to complete. At the conclusion of the test, a Pass or Fail message will be displayed. Press F4 at the conclusion of the test to return to normal measuring mode or to terminate the test.

Press FLO (F2) from the main menu. The display will show:

FLOW PARAMETER 1
DGN UNT PRM EXIT
F1 F2 F3 F4

Press DGN (F1). The display will show:

DIAGNOSTIC
SIM TST EXIT
F1 F2 F3 F4

Press TST (F2). The display will show:

DIAGNOSTIC
CALV ZRO EXIT
F1 F2 F3 F4

Press CALV (F1) to perform the CAL-V™ verification test.

Note: The FT3 will stop measuring flow when performing this test. Press EXIT (F4) to exit if you do not wish to continue.
Operation: CAL-V™

CAL-V™

To select what the flow output will do during CAL-V™, choose from these options:

- Go To Zero: Flow output will be zero during the test (i.e., 4mA)
- Hold Value: Flow will hold last value during the test

Select the option using NXT (F1) and then press OK (F4).

WARNING: If you are using closed loop control, the system needs to be taken off-line during the test.

Press OK (F4) to start CAL-V™. CAL-V™ test screen:

This test will take up to 4 minutes (less time if there is flow) and will show the

Caution:
- The CAL-V™ test is valid for checking the calibration accuracy of flow meters installed in the applications for which it was calibrated including the gas/gas mixture, calibration range and pipe size shown on the calibration certificate.
- For applications with temperature exceeding 250°F (121°C), CAL-V™ test results may vary.
- Periodic inspection for damage and cleaning of the sensor elements is required.
Operation: Zero CAL-CHECK™

CAL-V™

Cal value changing as the power to the sensor is adjusted. The T=xxx is a count down timer indicating how much time is left to finish the test. A “Please Wait” message will be flashing on and off on line 2 during this test.

<table>
<thead>
<tr>
<th>CAL-V = 0.51</th>
</tr>
</thead>
<tbody>
<tr>
<td>Passed</td>
</tr>
<tr>
<td>OK</td>
</tr>
</tbody>
</table>

Upon test completion, the final CAL-V™ value will be displayed along with a Pass/Fail message.

Zero CAL-CHECK™

Performing the Zero CAL-CHECK™ Calibration Validation Test

The Zero CAL-CHECK™ test is a companion test to CAL-V™. Unlike CAL-V™, which may be performed in the pipe and at process conditions, Zero CAL-CHECK™ must be performed at zero flow to ensure a valid test result. This test is used to confirm that the flow meter still retains its original NIST-traceable calibration at zero flow and that the sensor is free of film or residue that may affect readings. The test takes less than 5 minutes to complete. At the conclusion of the test, a Pass or Fail message will be displayed. Press F4 at the conclusion of the test to return to normal measuring mode or to terminate the test.

Press FLO (F2) from the main menu. The display will show:

FLOW PARAMETER 1
DGN UNT PRM EXIT

F1 F2 F3 F4

NOTE. For accurate readings and best test results:
1. Perform a visual inspection of sensor window for damage/deformity and condition of sensor elements before starting the test.
2. The meter must be used in the same pipe size, with the same gas mixture, and in the same process conditions for which the meter was originally calibrated in the factory. Consult the original factory calibration certificate for details.
Operation: Zero CAL-CHECK™

Zero CAL-CHECK™ - Press **DGN (F1)**. The display will show:

```
  DIAGNOSTIC
    SIM   TST   EXIT
    F1    F2    F3    F4
```

Press **TST (F2)**. The display will show:

```
  DIAGNOSTIC
    CALV  ZRO   EXIT
    F1    F2    F3    F4
```

Press **ZRO (F2)** to choose the type of Zero CAL-CHECK™ test. If performing the test in the pipe, a "no flow" condition must be created. If performing out of the pipe, the meter must be removed and the sensor protected by a bottle.

```
  ZERO CHK MENU
    PIP    BTL   EXIT
    F1    F2    F3    F4
```

Performing the Zero CAL-CHECK™ - In the Pipe

Press **PIP (F1)** to choose to perform the test **in the pipe**. The display will show:

```
  ZERO PIPE TEST
    VER   SET   PRM   EXIT
    F1    F2    F3    F4
```

Press **VER (F1)** key to verify the Zero CAL-CHECK™.

```
  VERIFY ZRO?
    YES    NO
    F1    F2    F3    F4
```
Operation: Zero CAL-CHECK™

Zero CAL-CHECK™ - In Pipe

Press **YES (F1)** key to verify the Zero CAL-CHECK™.

<table>
<thead>
<tr>
<th>Process Zero and Stable</th>
<th>YES</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>F1</strong></td>
<td><strong>F2</strong></td>
</tr>
</tbody>
</table>

**WARNING:** If you are using "Pipe" test, you must verify that there is a no flow condition before proceeding. If you are performing the test in a bottle, be sure to isolate the sensor in a bottle - any air movement (even from a fan) can result in a false "fail" result.

Once process is stable, press **YES (F4)** key to begin the Zero CAL-CHECK™.

<table>
<thead>
<tr>
<th>Verifying ZRO</th>
</tr>
</thead>

F1  F2  F3  F4
```

Press TST (F2). The display will show:

```
DIAGNOSTIC
CALV  ZRO  EXIT
F1  F2  F3  F4
```

Press ZRO (F2) to choose the type of Zero CAL-CHECK™ test.

```
ZERO CHK MENU
PIP  BTL  EXIT
F1  F2  F3  F4
```

Press BTL (F2) to choose to perform the test out of the pipe. The display will show:
Operation: Zero CAL-CHECK™

Zero CAL-CHECK™ - Out of Pipe

Press **VER (F1)** key to verify the Zero CAL-CHECK™.

Press **YES (F1)** key to verify the Zero CAL-CHECK™.

**WARNING:** You must verify that there is a no flow condition before proceeding. Be sure to isolate the sensor completely - any air movement (even from a fan) can result in a false "Fail" result.

Once process is stable, press **YES (F4)** key to begin the Zero CAL-CHECK™.

This test will take less than 5 minutes. The T=xx is a count down timer indicating how much time is left to finish the test.
Operation: Zero CAL-CHECK™

Upon test completion, the final value will be displayed along with a Pass/Fail message.
Troubleshooting CAL-V™

If the FT3 Meter fails a CAL-V™ Calibration Validation test, the meter must be returned to the factory for evaluation. See the "Returning Your Meter" section in the Appendix of the FT3 Instruction Manual or visit our website at http://www.foxthermalinstruments.com/services/customer-service.php for information on how to return the meter.

Troubleshooting Zero CAL-CHECK™

If the FT3 Meter fails a Zero CAL-CHECK™ Calibration Validation test, there are a few reasons that could be the cause:

1. The sensor may be dirty or damaged
   - Visually inspect the meter for damage. If damage is found, meter may need to be serviced. Contact Fox Technical Assistance at 831-384-4300 for more information
   - Try cleaning the sensor and try the test again
   - If the meter fails again, move to #2

2. The sensor may not be properly covered/isolated
   - Out of Pipe:
     - Wind currents (fans in room included) could be affecting the sensor
     - For best results, be sure to use the factory-supplied PVC sensor cover (see Fig. 2.1 on Page 9)
     - If the factory-supplied PVC sensor cover is unavailable, use a clean dry plastic beverage bottle
   - In Pipe:
     - If using the Packing Gland Assembly, be sure that the Shut-off valve has been closed
     - Make sure that there is a "no flow" or zero flow condition on the meter's sensor
     - Try the test again
     - If the meter fails again, move to #3

3. The meter may not have stabilized properly
   - Make sure the meter is not being affected by vibrations or other movement
Troubleshooting

- Allow the meter to stabilize without being moved or touched for 15 minutes
- Try the test again
- If the meter fails again, contact Fox Technical Assistance at 831-384-4300
